PRIYA KUMARI

Software Engineer — Backend Development
Munirka, Mehrauli, New Delhi 110067 +91-7003389956 priyashah1539@gmail.com
linkedin.com/in/priya-kumari github.com/priyakumari0104 LeetCode

Profile

Backend-focused software engineer with hands-on experience building REST APIs and database-driven services (Node.js, Express, MongoDB, MySQL) with an emphasis on reliability and performance — JWT authentication, role-based access control, Redis caching, rate limiting, and pagination to keep response times stable under concurrent load. Designed a state-machine-based booking workflow with real-time WebSocket updates in a live product. Strong in data structures, algorithms, OOP, and operating systems , comfortable with Git, SQL, Docker, and Linux.

Education

Jawaharlal Nehru University, New Delhi Aug 2025 – Present
Master of Computer Application CGPA: 7.33/9.0

Veer Kunwar Singh University, Bihar Oct 2022 – Oct 2025
Bachelor of Computer Application CGPA: 7.5/10.0

Technical Skills

Languages	Java, JavaScript (ES6+), C++, SQL
CS Fundamentals	Data Structures & Algorithms, OOP, Operating Systems, Debugging
Backend & APIs	Node.js, Express.js, REST APIs, HTTP, JSON, JWT Authentication, RBAC, Rate Limiting, WebSockets (Socket.IO)
Databases & Caching	MongoDB, MySQL, PostgreSQL, Redis (caching)
Tools & Platforms	Git, GitHub, Docker (basic), Linux, VS Code, React.js (front-end)
Workflow / AI	Conversational state-machine design, Ollama, Llama 3.2 (LLM integration)

Projects

JurisDesk — AI-Powered Legal Consultation Platform (MERN, WebSockets, Redis) GitHub Live Demo

- Architected and deployed a full-stack legal consultation platform (MERN + WebSockets) with JWT authentication and role-based access control across Admin, Lawyer, and Client roles.
- Designed and built 15+ REST APIs (Node.js/Express/MongoDB) covering authentication, lawyer verification, appointment scheduling, and consultation management.
- Improved API performance and stability with Dockerized Redis caching, per-user rate limiting (20 requests/min), and pagination, reducing repeated-query load on MongoDB under concurrent requests.
- Designed the booking flow as a multi-stage conversational state machine — lawyer selection, date/time, consultation mode, confirmation — integrated with an Ollama (Llama 3.2) assistant and real-time Socket.IO updates to fully automate appointment booking.
- Built partial-match lawyer-recommendation scoring so the assistant surfaces relevant lawyers directly from a client's described legal need, removing manual search from the booking flow.

Hostel Helpdesk — MERN Stack GitHub

- Built a MERN-based complaint management system with role-based access for Students, Helpers, and Administrators, each with a dedicated dashboard and JWT-authenticated access.
- Designed REST APIs for complaint submission, task assignment, status tracking, and resolution workflows.
- Diagnosed and fixed cross-cutting bugs spanning authentication, authorization, and database layers, improving end-to-end workflow reliability.
- Added real-time status updates and full complaint history logging, improving transparency between students and staff.

Experience

Frontend Development Intern — EquinoxSphere 1 Jul 2026 – 30 Aug 2026

- Implemented API-driven workflows against an existing production codebase, coordinating with backend and QA teams to scope and ship changes.
- Contributed to an enterprise-level HRMS application, building and maintaining UI components, forms, and validation logic with React.js and REST APIs.
- Collaborated on bug fixes and feature enhancements via Git/GitHub, including code review and branch-based workflows.

Certifications And Honors

- **AIR 391 — NIMCET 2025** — Secured All India Rank 391 in NIMCET 2025 among thousands of candidates nationwide.
- **Front-End Development Internship Certificate** — IBM SkillsBuild (CSRBOX) Aug 2024
